

Project Executable Files

Date	5 July 2026
Team ID	SWTID-2026-7147
Project Name	Smart Lender
Maximum Marks	3 Marks

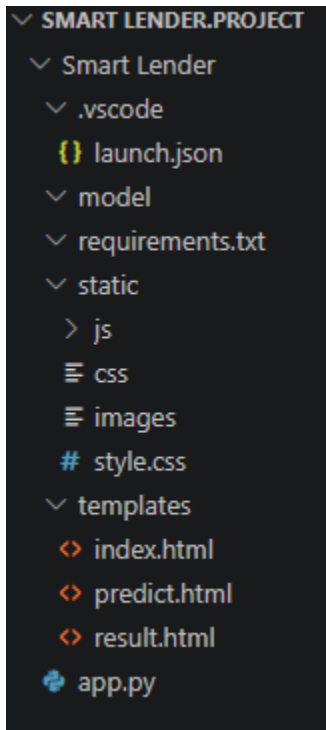

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	http://127.0.0.1:5000
Login Credentials (Demo)	Not required
Platform / Hosting Provider	Flask
Repository Link	https://github.com/pavanirayapati/AI-ML-and-GEN-AI-Track-Project-Template
Demo Video Link	https://drive.google.com/file/d/1-4PvHmzxUZ99QslHf7sSuVlBstaBejb_/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

The following software and tools are required to run the Smart Lender project:

- Operating System: Windows 10/11 (or Linux/macOS)
- Python 3.10 or later
- Visual Studio Code
- Git (optional, for cloning the repository)
- Flask Framework
- Required Python libraries (listed in requirements.txt)
- Web Browser (Google Chrome, Microsoft Edge, or Mozilla Firefox)
- Internet connection (only for downloading dependencies)

Step 1: Clone or Download the Project

- Clone the repository using Git:

```
git clone< https://chatgpt.com/c/6a4b3e97-3204-83ee-ae11-c3f8591bbbcc >
```

Step 2: Open the Project

- Open the project folder in Visual Studio Code.

Navigate to the project directory:

```
cd Smart-Lender
```

Step 3: Install Required Packages

- Install all dependencies:

```
pip install -r requirements.txt
```

- If Flask is not installed:

```
pip install flask
```

Step 4: Run the Flask Application

- Run the application:

```
python app.py
```

- The terminal should display something similar to:

Running on <http://127.0.0.1:5000>

Step 5: Open the Application

- Open any web browser and visit:

http://127.0.0.1:5000

The **Smart Lender Home Page** will appear.

Step 6: Predict Loan

- Click Predict Loan, enter the applicant details, and submit the form
- View the prediction result (Loan Approved or Loan Rejected)

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The prediction accuracy depends on the quality and size of the training dataset.	Accuracy can be improved by training the model with a larger and more diverse dataset
2	The application currently uses a limited set of applicant features for prediction.	Additional features such as Age, Employment Type, Property Value, Existing Loans, and CIBIL Score can be added in future versions.
3	The application runs on the Flask development server (localhost) during development.	The project can be deployed on IBM Cloud, Render, Railway, or other cloud platforms for public access.
